

Rain Garden 1

We are excited to announce the actual building of Rain Garden 1. The start date is now confirmed to be Tuesday June 10 and Wednesday June 11 (rain would be pushed back a day). We have CMS offering a special rate for the excavator. J & J Materials give us a great deal on materials. Mahoney's East Falmouth offered a great price for the plants.

Volunteers will do the rest of the work. There cannot be too many volunteers. We are hoping that many will join us for this great, fun, and influential project. Rain gardens filter the harmful nitrogen and other contaminants from entering our salt water. This is a natural and beautiful way to start the process of reversing years of damage to our Cove. All the plants will be native and most will be pollinators. More butterflies!! Click this link for the APCC description of "What is a Rain Garden" [cape-cod-raingarden APCC - Copy.pdf](#)

Rain Garden one will be near the intersection of Circuit Ave. and Bell Buoy Road. (photo below)
